

Part A

A sculptor is making a statue of a duck. She first creates a model. To make the model requires exactly 2 kg of bronze. The final statue will be 5 times the size of the model. How much bronze, in kg, will she require to cast the final statue?

1. 2
2. 10
3. 25
4. 50
5. 250

Part B

When the sculptor finished making her model of the duck statue, she gave it 2 coats of varnish. This took exactly one can of varnish. How many cans of varnish will she need to give the final statue 2 coats of varnish?

1. 10
2. 25
3. 50
4. 125
5. 250
